Data and analytics engineer who builds the whole system, not just the script: from Oracle and PostgreSQL extraction through validation, analytics and machine learning to dashboards and secure Django web applications — then deploys and documents it. 5+ years across banking, tax administration and accounting consulting in Uzbekistan and South Korea, and a KAIST Techno-MBA on a Korean Government Scholarship (GMAT 710). Most of my systems were owned and delivered solo, end to end. Looking for a data, analytics or Python backend role in Japan, inside a strong engineering team.

100%
of daily & monthly regulatory reports automated

2
analysts freed from routine manual work

>50%
less manual analysis & reporting time

12,000+
auto-graded questions in a platform I built

PROFESSIONAL EXPERIENCE

Risk Analytics & Data Platform Engineer
02/2025 – Present

Kapitalbank JSCB · Tashkent

- Designed and built, as the sole engineer, a secure internal Django analytics platform used by management and the risk department.
- Built the end-to-end pipeline: Oracle → preprocessing → validation → aggregation → analytics → dashboards → reports.
- Automated **100% of daily and monthly regulatory and management reports**, freeing **two analysts** from routine manual work.
- Delivered portfolio analytics, NPL tracking, trend and growth modelling and KPI monitoring, behind role-based access.
- Wrote the full technical and data-processing documentation. The system runs only on the bank's internal network; a demo on synthetic data is available on request.

Python · Django · Pandas · Polars · SQL · Oracle · PostgreSQL · Plotly

Data & Cost Analytics Engineer
10/2024 – 02/2025

Dasan DMC · Seoul

- Built a cost-modelling and profitability analytics system for automotive parts.
- Automated data collection, transformation and scenario analysis.
- Owned the data logic, models and analysis end to end.

Python · Pandas · SQL

Analytics Automation Engineer (Contract)
02/2024 – 10/2024

Shinhan Accounting Corporation · Seoul

- Built a Django analytics system end to end: data ingestion, validation, processing, analytics and reporting.
- Cut manual analysis and reporting time by **more than 50%**.
- Built Tableau dashboards for client scoring, portfolio quality and risk indicators.
- Owned the architecture, backend and data logic.

Python · Django · Pandas · SQL · Tableau

WHAT I BUILD

1. **Extract**
   Oracle · PostgreSQL · MySQL
2. **Clean & validate**
   Pandas · Polars
3. **Analyse & model**
   statistics · scikit-learn
4. **Visualise**
   Plotly · Dash · Tableau · Power BI
5. **Ship the app**
   Django · auth · roles
6. **Automate**
   scheduled reports · docs

SKILLS

Data & analytics
Python (advanced) · SQL · Pandas · Polars · NumPy · scikit-learn · Statistics & A/B testing · ETL pipelines · KPI & portfolio analytics

Backend & ops
Django (auth, sessions, roles, ORM, i18n) · PostgreSQL · Oracle · MySQL · REST-style APIs · Git / GitHub · Railway · AWS S3 · Cron & task automation

BI & visualisation
Tableau · Power BI · Plotly · Dash · Matplotlib · Report generators

Domains
Banking risk (NPL, portfolio, KPI) · Tax administration · Cost & profitability · Credit analysis · EdTech

Risk Analyst
2020 – 2021

State Tax Committee of Uzbekistan · Tashkent

- Led the digitalisation of the waybill system, from paper to online.
- Designed the data workflow logic and validation structure.
- Cut processing time by **~50%** and made the process transparent.

Credit Analytics Analyst
2019 – 2020

Alokabank · Tashkent

- Prepared analytical summaries and risk indicators for **200+ loan cases**.
- Developed a structured evaluation logic for credit decisions.

KEY PROJECTS

Powerty — data-driven learning platform
2026 – Present

Founder & engineer · powerty.uz

- Designed and built a bilingual (English/Uzbek) platform for GMAT, SAT, IELTS, TOPIK, Japanese and school maths: **900+ lessons, 12,000+ auto-graded questions, 800+ graded readings** and timed mock exams.
- Engineered an adaptive digital-SAT simulator (module routing, raw → 400–1600 scaled scoring) and a GMAT Focus simulator on one shared exam engine.
- Built content pipelines guarded by automated "answer gates" — scripts that recompute every answer key by an independent route (brute force over fractions, state-space search) before import.
- Runs in production on PostgreSQL + Railway: a cron-driven Telegram bot, an installable PWA, full i18n, TTS audio and headless-Chrome PDF generation.

Python · Django · PostgreSQL · AWS S3 · Git/GitHub · Railway · Bootstrap · AI-assisted development (Claude Code)

Data science & analytics portfolio

Kaggle · Tableau Public · kaggle.com/usmanjon

- House-price prediction with a Random Forest regressor; movie recommendation with TF-IDF and nearest neighbours.
- Hypothesis testing and A/B tests (Student's t-test); Korea demographics analysis; a business-analytics case study.
- Interactive Tableau dashboards on Tableau Public.

scikit-learn · Pandas · Matplotlib · Tableau

EDUCATION

Techno-MBA
KAIST — Korea Advanced Institute of Science and Technology
South Korea · 2022 – 2024

- Korean Government Scholarship (GKS)
- GMAT 710
- Big Data Analysis, Database Management, Financial Data Analysis, Machine Learning, Business Analysis

Korean Language Program
Keimyung University
South Korea · 2021 – 2022

- Korean Government Scholarship (GKS)
- TOPIK Level 6 — the highest level

Bachelor of Taxation
Tashkent Financial Institute
Uzbekistan · 2015 – 2019

- Thesis: tax strategies of the USA, Korea and Germany, applied to the Uzbek tax model
